Problem Statement

Microsoft .Net certification course project will test your ability to work with services. Following is the problem statement for the same:

Background

Mr. Tyson is a college principal and is eagerly engaged in system management in his college recently he got a suggestion to digitize the library records in his college for which, he calls a professional .Net developer to build a functional library management website, for which he has proposed following technical requirements.

Technical Requirements

Create a Library Management website using ASP.NET, and MSSQL Server database, the website should be created using C#, HTML (CSS can be used to design the user interface, you can also use bootstrap to make it easier, in case you have knowledge about the same) with proper header, footer and master-page the resulting website should contain following functional elements:

1. **Login Page:** Should contain Email and Password fields, where Librarian or students can login into website with their respective roles.
2. **Admin Page:** Where you can login as admin and perform Add, Read, update, delete operations on the books, students & all the attributes.
 - A. **Add Publication Page:** Where admin can the add new publications and once added a gridview shall display the added items.
 - B. **Add Book Page:** This page consists of Book name, details of book, author name, publication, branch, price, Quantity, picture of the book and a gridview shall display all the added books.
 - C. **Add Book Report Page:** Where admin can select the branch and publication.
 - D. **Add Branch page:** Branch name, can be added by admin.
 - E. **Add Student Page:** Admin can add new student with corresponding details including name, branch, Gender, Birth date, Mobile, Address, City, Pincode, Photo, Email, Password.
 - F. **Add Student Report Page:** This Page consists of details (Branch & name) of the student in dropdown list where Admin can generate student report.
 - G. **Issue Book Page:** Where Admin can Select publication & corresponding book from dropdown to issue the available books to the added students.
 - H. **Issue Book Report Page:** Where Admin can Select corresponding branch & student to generate report of issued book.
 - I. **Return Book Page:** This page consists of student & details of book issued to the student; Admin can mark the return of book.
 - J. **Penalty Page:** This page Generates penalty report for the unreturned book student wise.
 - K. **Logout Button:** On selecting this button will be redirected be login page.
3. **Student Page:** Where you can login as student and check one's account, report, penalty report, book report.

- A. **My Account Page:** This page is of student details like name, mobile, address, city, pin code, email and student can also Edit his account & change one's password.
- B. **My Report Page:** This is read-only page consists of previous history of borrowed books of student.
- C. **Penalty Report Page:** This is read-only page consists of details of penalty of unreturned books.
- D. **Book Report Page:** This is read-only page consists of borrow book & Return book details.
- E. **Logout Button:** On selecting this button will be redirected be login page.

Deliverables

You are expected to create the web project and submit them in executable format.

As a .Net developer, you must take into consideration the above-mentioned requirements and give an executable solution in the form of a web application.
